Co-Founder / CTO | Data Privacy Tool

Hey! We are Phil & Dan, and we are working on a B2C data privacy software solution, for which we are now seeking the right person to complement us as a technical leader, with the potential to become our new Co-Founder / CTO.

Data Flares is all about data privacy, especially tracking on the web. To make things short - tracking on the internet is ubiquitous. Data privacy is not just a trend, but a constantly growing and promising market. Trying to address this issue, there are many existing approaches. Most of them try to *disable* tracking. We want to explore a different path to solve that problem. We want to develop a software solution for simulated consumer behavior on the internet to deflect behavioral analysis. Our vision is to give the people back the power over their own data by hiding it in simulation - an approach that hasn't been seen before.

Your Mission

- Be the solutions architect - create the software structure and supervise the development, not coding everything by yourself (but of course we will not hold you back)
- Develop a strategy for using our technical resources to build a cutting-edge privacy tool
- Manage and communicate product roadmaps, tasks, deadlines, and technological agendas
- General technical responsibility and tech ownership of Data Flares

Your Profile

- Experience in managing software projects across the stack and a firm understanding of web framework, databases, algorithms, tracking, and data privacy
- Good knowledge about the different relevant languages
- Strong communication and organizational skills + fluent in English
- Work quickly and goal-oriented while maintaining strong attention to detail and accuracy
- Intrinsic motivation and skills to throw yourself into a promising journey and build from scratch

Our Offer

- Join a promising and award-winning project at an early stage with the perspective of co-founding, stock options included
- Opportunity to take responsibility and create something new
- Modern and agile startup environment with the option of working in remote
- An exciting and innovative technological challenge with high impact and purpose

If this sounds exciting and you got curious to learn more about us and our idea, please reach out ASAP with a couple of words about yourself (or CV if you have one). We are looking forward to hearing from you ! *Get in touch:* team@dataflares.com
